Experience

Los Angeles Philharmonic (Non-Profit)

Data Management Coordinator

Los Angeles, CA (Hybrid) | July 2026—PRESENT

- Administer Salesforce (CRM) for the LA Phil Learning Department by planning and implementing system changes aligned to departmental goals, and maintaining data integrity across 5,000+ student, alumni, prospect, and teaching artist records
- Manage system security, user access, and data backups by administering permission sets, auditing account activity, and safeguarding the secure handling of all Learning Department data
- Deliver performance analytics for all Youth Orchestra Los Angeles (YOLA) program hubs by structuring program data for reporting, translating departmental questions into system requirements, and equipping managers to make decisions from current data
- Produce documentation covering user guides, data procedures, and system functionality by capturing system workflows, standardizing processes, and enabling consistent knowledge transfer across the department

Data Project Assistant

Feb 2026—July 2026

- Directed ongoing Salesforce operations across 5 program sites by implementing configuration enhancements, managing relational data structures, and ensuring consistent data accessibility for program staff
- Remediated critical data integrity issues by auditing datasets, resolving duplicate and incomplete records, and executing bulk record operations to preserve accuracy across thousands of system entries

Data & Systems Intern

Aug 2025—Feb 2026

- Produced analytical reports in Salesforce and Excel to evaluate attendance trends, participation rates, and cohort progression across multi-year program cycles, and integrated third-party tools including FormAssembly to streamline data collection

Underdog Devs (Non-Profit)

Frontend Engineer Intern

Remote | Mar 2022—Apr 2022

- Refactored a registration feature on a nonprofit education platform to improve usability using interactive tooltips and accessible design principles
- Applied CI/CD pipelines and Git-based workflows to deploy features and maintain code quality across frontend and backend systems in an Agile, cross-functional team

Skills

- **Languages:** C#, CSS, HTML, JavaScript, Python, SQL, TypeScript
- **Platforms & Tools:** AWS, Bash, Excel, Express, FormAssembly, Git/GitHub, Google Workspace, Linux (Mint), Microsoft Office Suite, Monday.com, MySQL, .NET, Node.js, Outlook, PostgreSQL, React.js, Salesforce (CRM), SharePoint, Slack, Vite
- **Core Competencies:** CI/CD, Data Governance, Data Validation, Hardware & System Troubleshooting, Project Management, Relational Data Modeling, Reporting & Dashboarding, Requirements Gathering, REST APIs, Salesforce Administration, System Security & User Access, Technical Documentation, Test-Driven Development (TDD)

Education

- **B.S. Software Engineering**, Western Governors University 2026
- **CompTIA Project+**, CompTIA 2026
- **ITIL 4 Foundation**, PeopleCert 2025
- **AWS Certified Cloud Practitioner**, Amazon 2024
- **A.S. Computer Science**, Crafton Hills Community College 2023
- **Full Stack Web Development Certificate**, BloomTech (Formerly Lambda School) 2022

Projects

Pass The Cake Shop — React / Vite / GitHub Actions

jcpcab.github.io/PTC_Shop

- Built and deployed the production website for my small batch cheesecake business using React, Vite, and CSS Modules, writing all component styles from scratch rather than using a UI framework
- Implemented a responsive menu, product gallery, and order request form allowing customers to browse offerings and submit made to order inquiries from any device
- Automated deployment through a GitHub Actions workflow that rebuilds and publishes to GitHub Pages on every push to main, and configured page metadata for search indexing and social link previews

Client Scheduling System — C# WinForms / MySQL

- Built a full-stack scheduling application in C# Windows Forms connected to a live MySQL database, supporting full CRUD operations for customers and appointments across a multi-table relational schema
- Implemented timezone-aware appointment handling using TimeZoneInfo to convert between local and UTC time, and built a login-time alert system to notify users of appointments within 15 minutes
- Detected the user's system language at login to automatically localize the UI, and generated dynamic business reports using LINQ lambda expressions with all login activity tracked in a persistent log file
